LEONI TOWNSHIP BRILLS LAKE ROAD S.A.D. RESOLUTION

SPECIAL ASSESSMENT RESOLUTION NO. 3B

(SEWER EXTENSION TO BRILLS LAKE ROAD)

48x2

Township of Leoni

County of Jackson, State of Michigan

TO: THE RESIDENTS AND PROPERTY OWNERS OF THE TOWNSHIP OF LEONI, JACKSON COUNTY, MICHIGAN, WITHIN THE SEWER EXTENSION TO BRILLS LAKE ROAD SPECIAL ASSESSMENT AND ANY OTHER INTERESTED PERSONS:

WHEREAS, the Township Board of the Township of Leoni, County of Jackson, State of Michigan, by resolution determined to acquire and construct the public improvements described in Exhibit A attached hereto and made a part hereof and assess the cost thereof to the property benefitted by said improvements, all in accordance with Act 188, Public Acts of Michigan, 1954, as amended; and

WHEREAS, the Supervisor has prepared and reported to the Township Board a special assessment roll assessing part of the cost of said improvements to the property benefitted thereby, with the Supervisor’s certificate attached thereto; and

WHEREAS, the Township Board desires to set the date for a public hearing to review the special assessment roll and hear objections thereto.

I hereby certify that the foregoing is a true and complete copy of a resolution adopted by the Township Board of the Township of Leoni, County of Jackson, State of Michigan, at a special meeting held on June 19, 2025, and that said meeting was conducted and public notice of said meeting was given pursuant to and in full compliance with the Open Meetings Act, being Act 267, Public Acts of Michigan, 1976, as amended, and that the minutes of said meeting were kept and will be or have been made available as required by said Act.

Cindy Norris,

Leoni Township Clerk

TAKE NOTICE that pursuant to the provisions of Act 188, Public Acts of Michigan, 1954, as amended, a special assessment roll has been prepared and is on file in the office of the Township Clerk for public examination. Said special assessment roll has been prepared for the purpose of assessing part of the cost of the following described improvements to the above property benefitted therefrom:

The acquisition, construction, furnishing and equipping of improvements to the Township’s sanitary sewer system, consisting generally of constructing an extension of the Township’s public sewer system to lots or parcels adjacent to or in the vicinity of Brills Lake Road, along with all necessary appurtenances and attachments thereto, necessary rights of way and interests in land.

TAKE FURTHER NOTICE that the Township Board will meet on Wednesday, the 8th day of July, 2025, at 6:00 p.m., prevailing Eastern Time, at the Leoni Township Hall, 913 Fifth Street, Michigan Center, Michigan, for the purpose of reviewing said special assessment roll and hearing any objections thereto.

TAKE FURTHER NOTICE that appearance and protest at this hearing is required in order to appeal the amount of the special assessment to the State Tax Tribunal if an appeal should be desired. A property owner or party in interest, or his or her agent, may appear in person at the hearing to protest the special assessment or may file his or her appearance by letter delivered to the Township Clerk at or prior to the meeting to be held on July 8, 2025, and his or her personal appearance shall not be required. The property owner or any person having an interest in the property subject to the proposed special assessments may file a written appeal of the special assessment with the State Tax Tribunal within thirty-five (35) days after confirmation of the special assessment roll if that special assessment was protested at this hearing.

EXHIBIT A

Public Improvements

The acquisition, construction, furnishing and equipping of improvements to the Township’s sanitary sewer system, consisting generally of constructing an extension of the Township’s public sewer system to lots or parcels adjacent to or in the vicinity of Brills Lake Road, along with all necessary appurtenances and attachments thereto, necessary rights of way and interests in land.

2024 Water Quality Report for the Village of Onsted

Water Supply Serial Number: 05020

This report covers the drinking water quality for the Village of Onsted for the 2024 calendar year. This information is a snapshot of the quality of the water that we provided to you in 2024. Included are details about where your water comes from, what it contains, and how it compares to the Environmental Protection Agency (EPA) and State of Michigan standards.

Source Water: Your water comes from four (4) groundwater wells, all over 175 feet deep and located in the village. The water is treated to remove excess iron and arsenic, and a disinfectant is added to protect against microbial contaminants.

The State performed an assessment of our source water to determine the susceptibility or the relative potential of contamination. The susceptibility rating is on a seven-tiered scale from "very-low" to "very-high" based on geologic sensitivity, well construction, and water chemistry and contamination sources. The susceptibility of our sources is Moderate.

If you would like to know more about this report, please contact: Village of Onsted, 108 S. Main Street, Onsted MI, 49265, or 1-517-467-4618, <https://www.villageofonsted.org>

Contaminants and their presence in water: Drinking water, including bottled water, may reasonably be expected to contain at least a small number of contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (800-426-4791).

Vulnerability of sub-populations: Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised people, such as people with cancer undergoing chemotherapy, people who have undergone organ transplants, people with HIV/AIDS or other immune systems disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Center for Disease Control guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Sources of drinking water: The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. Our water comes from wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can naturally occur or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture and residential uses.
- **Radioactive contaminants**, which can be naturally occurring or be the result of oil and gas production and mining activities.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

To ensure that tap water is safe to drink, the U.S. EPA prescribes regulations that limit the levels of certain contaminants in water provided by public water systems. Federal Food and Drug Administration regulations establish limits for contaminants in bottled water which provide the same protection for public health

Water Quality Data

The table below lists all the drinking water contaminants that we detected during the 2024 calendar year. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done January 1 through December 31, 2024. The State allows us to monitor certain contaminants less than once per year because the concentration of these contaminants is not expected to vary significantly from year to year. All the data is representative of the water quality, but some are more than one year old.

Terms and abbreviations used below:

• **Maximum Contaminant Level Goal (MCLG):** The level of contaminant in drinking water below which there is no known or expected risk to

health. MCLGs allow for a margin of safety.

• **Maximum Contaminant Level (MCL):** The highest level of contaminant that is allowed in drinking water. MCLs are set as close to MCLGs as feasible using the best available treatment technology.

• **Maximum Residual Disinfectant Level (MRDL):** The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

• **Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

• **Treatment Technique (TT):** A required process intended to reduce the level of contaminants in drinking water.

• **N/A:** Not applicable

Monitoring Data for Regulated Contaminants							
Regulated Contaminant	MCL, TT, or MRDL	MCLG or MRDLG	Level Detected	Range	Year Sampled	Violation Yes/No	Typical Source of Contaminant
Arsenic ¹ (ppb)	10	0	5.00	4 - 6	2024	NO	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Fluoride (ppm)	4	4	ND	0.65 - 0.77	2024	NO	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Sodium ² (ppm)	N/A	N/A	28.2	17 – 23	2024	NO	Erosion of natural deposits
TTHM Total Trihalomethanes (ppb)	80	N/A	9.8	N/A	2023	NO	Byproduct of drinking water disinfection
HAA5 Haloacetic Acids (ppb)	60	N/A	4	N/A	2023	NO	Byproduct of drinking water disinfection
Chlorine ³ (ppm)	4	4	0.56	0.25 - 1.63	2023	NO	Water additive used to control microbes
<div>1 While your drinking water meets the U.S. EPA standard for arsenic, it does contain low levels of arsenic. The U.S EPA standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The U.S. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and Circulatory problems.</div> <div>2 Sodium is not a regulated contaminant.</div> <div>3 The chlorine "Level Detected" was calculated using a running annual average.</div>							
Inorganic Contaminant Subject to Action Levels (AL)	Action Level	MCLG	Your Water ⁴	Range of Results	Year Sampled	Number of Samples Above AL	Typical Source of Contaminant
Lead (ppb)	15	0	4.0	0 -6.0	2024	0	Lead service lines, corrosion of household plumbing including fittings and fixtures; Erosion of natural deposits
Copper (ppm)	1.3	1.3	0.1	0.0 -0.1	2024	0	Corrosion of household plumbing systems; Erosion of natural deposits
<div>Ninety (90) percent of the samples collected were at or below the level reported for our water.</div> <div>Information about lead: Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formulated and breast fed), and young children: Lead in drinking water is primarily from materials and parts used in service lines and home plumbing. The Village of Onsted is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when, your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by Identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for at least 5 minutes to flush water from both your home plumbing and lead service line. If you are concerned about lead in your water, you may wish to have your water tested, contact the Village of Onsted at 517-467-4618 or http://www.villageofonsted.org/ for available resources. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at http://www.epa.gov/safewater/lead.</div> <div>The Village of Onsted has 358 water service lines, 0 of which are known to be lead service lines at the time of this report and 25 that are unknown or yet unverified material.</div>							

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER Monitoring Requirements Not Met for the Village of Onsted

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the second quarter of 2024 we did not take arsenic samples that were submitted to a certified laboratory for compliance and therefore cannot be sure of the quality of our drinking water during that time. However, this violation does not pose a threat to your supply's water.

What should I do? There is nothing you need to do at this time. This is not an emergency. You do not need to boil water or use an alternative source of water at this time. Even though this is not an emergency, as our customers, you have a

- **ND:** not detectable at testing limit
- **ppm:** parts per million or milligrams per liter
- **ppb:** parts per billion or micrograms per liter
- **ppt:** parts per trillion or nanograms per liter
- **pCi/l:** picocuries per liter (a measure of radioactivity)
- **Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

• **Level 1 Assessment:** A study of the water supply to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

• **Level 2 Assessment:** A very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred ,and/or why total coliform bacteria have been found in our water system on multiple occasions.

What happened? What is being done? We missed the samples to be tested at a certified laboratory. However, the weekly in-house samples were taken. We are making every effort to ensure this does not happen again.

Samples were collected in July 2024 and reported to the State, which changed this to a reporting violation because they were not reported in a timely manner.

For more information, please contact the Village of Onsted at 517-467-4618

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail. This notice is being sent to you by the Village of Onsted.

IMPORANT INFORMATION ABOUT YOUR DRINKING WATER Monitoring Requirements Not Met for Onsted

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During June 1 to September 30, 2024, we did not monitor correctly for lead and copper, and therefore cannot be sure of the quality of our drinking water during that time.

What should I do? There is nothing you need to do at this time. This is not an emergency. You do not need to boil water or use an alternative source of water at this time. Even though this is not an emergency, as our customers, you have a right to know what happened and what we are doing to correct the situation.

The table below lists the contaminants we did not properly test for, how often we are supposed to sample for these contaminants, how many samples we are supposed to take, how many samples we took, when samples should have been taken, and the date we will collect follow-up samples.

Contaminants	Required sampling frequency	Number of sites sampled
Lead and copper	10 sites to be sampled every 3 years	5
When samples should have been collected	Date additional samples will be collected	
June 1, 2024 to September 30, 2024	June 1, 2025 to September 30, 2025	

What happened? What is being done? We unintentionally missed taking samples within this required sampling period. We are making every effort to ensure this does not happen again.

For more information, please contact: Village of Onsted, 517-467-4618.
